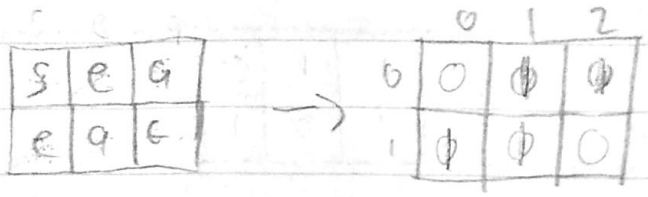
Min ASCII delete Sum on 2 Strings

h = Sea & eat = 231 — delete 'e' and 'S'

h = delete & leet = 403 — delete "dee" and 'e'

We Create a 2D array of the same dimensions as the strings



We compare each letter in first to each letter of second word, if letter match, we add a 1 on those locations

[0][0] = [1][0] X

[0][1] = [1][0] ✓

[0][2] = [1][1] ✓

then go ASCII value for the letters where its value in second matrix equals to zero

S = 115 e = 116 115 + 116 = 231
